1. Car lib.dll

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace car_lib
{
    public class Class1
    {
        public int model;
        public string company_name;
        public int price;
        public int model_year;
        //properties
        public string color
        {
            set { }
            get { return "ss"; }
        }
        public int weight
        {
            set { }
            get { return 0; }
        }

        //methods
        public void paint() { }
        public void sell() { }
        public void buy() { }
        public void rent() { }
    }
}
```

2. Mobile lib.dll

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

namespace mobile_lib
{
    public class Class1
    {

        public int model;
        public string company_name;
        public int price;
        public int ram;
        public int no_of_sim;
        public int internal_memory;
        public string location;
        //properties
        public string color
        {
            set { }
            get { return "Black"; }
        }
    }
}
```

```

    }
    public int weight
    {
        set { }
        get { return 0; }
    }
    public string antivirus
    {
        set { }
        get { return "Installed"; }
    }
    //methods
    public void buy() { }
    public void sell() { }
    public void Backcover() { }
}
}

```

3. Books lib.dll

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

```

```

namespace Books_lib
{
    public class Class1
    {
        public int no_of_pages;
        public string name;
        public string author;
        //property
        public double rating
        {
            get { return 5.0; }
            set { }
        }
        public int weight
        {
            set { }
            get { return 0; }
        }
        //methods
        public void issue() { }
        public void buy() { }
        public void sell() { }
        public void ebook() { }
        public void xerox() { }
    }
}

```

4. Reflection lib.dll

```

using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;

```

```

namespace reflection_lib
{
    public class Class1
    {
        public int model;
        public string company_name;
        //properties
        public string color {
            set { }
            get { return "ss"; }
        }
        public int weight
        {

```

```
        set {}  
        get { return 0; }  
    }  
    //methods  
    public void lap_on() {}  
    public void lap_off() {}  
    public void app_install() {}  
    public void lap_on(int a, int b) {}  
}  
}
```
